(54) Text Input method

(57) A text data to input and display, character by character, is looked up in a dictionary to find a unique line of text which represents the unique word and which includes the text data input (Fig. 1 and 2).

If successful, the remainder of the text data to input is automatically supplemented from the dictionary (Fig. 2).

Relevant words for the unique word in the dictionary may be shown for the selection to replace.
